## CONTRIBUTORS

### The editors

Paul Van Mele is an agricultural scientist from Ghent University, Belgium. Since 1992, he lectured and worked in various multi-disciplinary research projects in Africa and Asia. His PhD explored Vietnamese fruit farmers' knowledge on pest management (Wageningen University, 2000). Besides numerous publications, he wrote *Ants as Friends* (2003) and edited *Way out of the Woods* (2003). In 2004, his video project on post-harvest innovations with women in Bangladesh won an international award for effective communication from the International Visual Communication Association in London. Paul Van Mele is a farmer participatory research and learning specialist at CABI.

Ahmad Salahuddin graduated in 1984 as a sociologist from Rajshahi University, Bangladesh. In 1995 he obtained his MA in development studies from the Institute of Social Studies in The Hague, The Netherlands. He has a strong background in facilitation, participatory action research, project planning and feasibility studies of development projects, especially related to water management. As research programme manager of PETRRA, Salahuddin was responsible for capacity building of all project partners from 1999 to 2004. Most experiences documented in this book reflect his strong input.

Noel Magor first came to Bangladesh in 1977, initially with the NGO HEED and then with IRRI and BRRRI as a farming systems agronomist. He completed his PhD 'Empowering Marginal Farm Families in Bangladesh' and a post doctoral fellowship on business and rural poverty reduction. In 1999, he was appointed project manager for PETRRA. He is the IRRI representative and a visiting fellow with the School of Politics and History of Adelaide University. His holistic approach to working with resource-poor farmers has resulted in his qualifications embracing both technical and social sciences.

### The authors (in order of appearance)

Thelma Paris is a socio-economist and gender specialist at the International Rice Research Institute for the past 28 years. She received her PhD in social ecology at the University of Western Sydney in 2000. Her engagement in research on socio-economics of farming systems, human nutrition, farmer participatory plant breeding, gender issues in rice farming and impact of out-migration on rice farming efficiency and gender won her numerous international (CGIAR Excellence Award for Local Professional) and national awards. She has helped various international and national rice research centres in developing strategies for mainstreaming gender concerns.

Shaila Arifa Nabi is a geneticist and member of the Participatory Promoter's Society of Bangladesh. Under PETRRA, as a younger member of the team, she supported strengthening gender dimensions in all research and extension sub-projects. In 2003, she participated in a six-month long "Professional Capacity Building Programme for Agricultural R&D" at ICRA, Wageningen, The Netherlands.

Helen Latifun Nessa received her MA in social science from Dhaka University in 1986 and a diploma in rural development from India. For more than 20 years she worked with NGOs and national and international consulting firms on socio-economic studies, stakeholders analysis, community development, gender training and organisational

development. Under PETRRA, the NGO Agricultural Advisory Society contracted her to lead a project on women-led group extension with resource-poor women. Ms. Helen possesses great expertise in organising and mobilising target groups or communities for any development approach.

Harun-Ar-Rashid is an agronomist who received his MSc from the Bangladesh Agricultural University and his MS in crop physiology from Reading University, UK. He has been working in agricultural research, development and extension in Bangladesh for the last 27 years for GOs, NGOs, national and international organisations, and private sector. He wrote several books, booklets, and manuals on agricultural production practices for farmers and extension agents. Harun-Ar-Rashid is the founding executive director of the Agricultural Advisory Society, a leading national agricultural-oriented NGO.

A. K. M. Zakaria is an agronomist with an MS from the Bangladesh Agricultural University (1985). For the last 15 years he has been working at the Rural Development Academy (RDA) in Bogra, where he is deputy director agriculture. Apart from having managed several research and development projects, he furthered his studies in Japan, Germany and at IRRI in the Philippines. His main professional interests are in the seed sector and rural communication. In 2004, RDA received the national Independence Day Award and an International Visual Communication Award due to his endeavours.

Md. Mojaherul Haque is an agronomist who was awarded his MS from the Bangladesh Agricultural University in 1999. He has been working at RDA Bogra since 2000 as research officer in various agricultural development projects.

Bashanti Chakroborty is a senior project coordinator in the women-focused NGO TMSS, Bogra.

Rina Nasrin is working as senior manager in the women-focused NGO TMSS, Bogra, for which she has been working for 11 years. Before that, she worked as a trainer for Socio-Impact, a research and consultancy agency.

Josephine Rodgers is a media producer with a degree in agricultural science and an MA in mass communications. She is director of the UK-based company Countrywise Communication and specialises in rural development, agriculture and the food sector. She has spent 19 years producing award-winning training programmes for organisations worldwide. The training provided by Mrs. Rodgers resulted in effective team of video makers at the Rural Development Academy and the women's NGO TMSS in Bogra.

Jeff Bentley is an agricultural anthropologist (PhD, University of Arizona, 1986). He has worked with smallholder farmers his whole career. He spent a year in Portugal, living with craft farmers (1983-84). He spent seven years in Honduras (1987-94) at Zamorano, an agricultural college, helping researchers and smallholders create appropriate integrated pest management technology. In 2002, Bentley and Peter Baker wrote a *Manual for Collaborative Research with Smallholder Coffee Farmers* (CABI). Jeff Bentley lives in Bolivia and is an international consultant.

Mohammad Abu Saleque is a soil scientist, who obtained his PhD from the University of the Philippines, Los Banos, in 1994. His research interest is soil fertility and plant nutrition. He is a believer of participatory research and possesses an open mind to learn

from farmers. He has been working for the Bangladesh Rice Research Institute for the last 21 years. Since 1999 Dr. Saleque is teaching at the Bangabandhu Sheikh Mujibur Rahman Agricultural University, Bangladesh as an adjunct faculty member.

Paula Nash is co-ordinator of the CABI Global Plant Clinic based in the UK. She assisted with many training courses for extension staff, including a forest pathology course on diagnostic techniques. In 2003, she received her MSc from Reading University in Tropical Agricultural Development. Paula became interested in extension through the work of her colleagues at CABI and tutors at Reading. For her dissertation she compared conventional and novel extension approaches in Bangladesh.

Mostafa Nuruzzaman is founder and director of the NGO Shushilan, and holds an MSS & LLB degree in political sciences from the Dhaka University. He has profound experience in rural development, agricultural research and extension. His charismatic leadership and unflinching commitment towards helping the poor has earned him immense people's respect.

Qazi W. Nawaz graduated from the Bangladesh University of Engineering and Technology in 1971. He joined the Public Works Department in 1973 for ten years, and worked for various private firms for six years. Since 1989 he has been involved in development activities, with a special interest in ecological agriculture. Mr. Nawaz has been working in Shushilan as research and development adviser since 1998.

Md. Rafiqul Haque graduated in agriculture from the Bangladesh Agricultural University in 1987. He has thirteen years of experience in agricultural related development work in different organization. He has been working in Shushilan as coordinator of sustainable environment resource management since 2003.

Malik Anwar Khan obtained his Masters in Bengali language and literature at the University of Chittagong in 1978. After graduation he joined the national NGO Friends in Village Development Bangladesh (FIVDB), based in Sylhet, where he is co-ordinator of the Poultry Programme. He went on study visits to the Philippines, Thailand and the UK. His life-long experience in duck production has been captured in three illustrated books. Under PETRRA, Mr. Malik had his first exposure to rice-duck, for which he visited China in 2002 and published a new guide book with Dr. Gazi Jashim.

Gazi Jashim Uddin Ahmed obtained his MSc (1976) and PhD (1996) in agronomy from the Bangladesh Agricultural University. He has been team leader of various research projects, and has a special interest in weed science. Under PETRRA he was principal investigator of the "Integrated rice-duck farming for resource-poor farm household" project. He is an adjunct faculty member of the Bangladesh Agricultural University and head of the Agronomy Division, BRRI.

Badrul Alam graduated in 1978 as an agricultural engineer from the Bangladesh Agricultural University. In 2002 he obtained his MBA from Newport University, USA. His whole career evolved around the establishment of sustainable markets for irrigation equipment, of which five years for the governmental Bangladesh Agricultural Development Corporation (BADC, 1978-1983), three years as chairman of a local NGO, and more than ten years for the NGO International Development Enterprises (IDE), where he works until today. Mr. Badrul has a unique expertise in developing local

networks with pump producers, dealers, mechanics, local governments, NGOs and poor farmers.

M. Hassanullah has degrees in agronomy and extension education and holds a PhD in business administration. He has 40 years of experience in agricultural research, extension and education, GO-NGO-business partnerships and community development. Presently, he is working as agricultural marketing specialist with a multi-disciplinary team of local and international consultants to prepare an ADB funded Agribusiness Development Project. Dr. Hassanullah is a life member of the Association for International Agricultural Extension Education, Ohio, USA, the Indian Society of Extension Education, the Institute of Management Consultant of Bangladesh and a former President of the Bangladesh Agricultural Extension Society.

Md. Abdus Salam received his agricultural degree from the Bangladesh Agricultural University in 1973. He was senior manager at the Bangladesh branch of British American Tobacco for 15 years. He worked as specialist in projects funded by SIDA/NORAD and USAID conducting adaptive research to support poor and marginal farmers. His life-long experience of contract growing and marketing of agricultural products was strengthened by visits to the USA, China, India and Thailand. Presently, Mr. Salam is executive director of APEX, a national NGO that works on agriculture, health, education, environment and gender issues.

Salim Ahmed graduated from the Bangladesh Agricultural University in 2000 and received his MBA from Trinity University & College, Delaware, USA in 2002. He worked for Winrock International, after which he joined the NGO APEX and became marketing officer at the Bangladesh Rice Exporters Association, funded by PETRRA. Currently, Mr. Salim is a lecturer agriculture and part-time consultant.

Solveig Danielsen is a plant pathologist (PhD, Royal Veterinary and Agricultural University of Denmark (KVL), 1998). She spent two years at CATIE in Costa Rica (1995-1997) and another two years at the International Potato Center in Peru (1999-2001) doing research on tropical plant diseases and crop protection. During her period as an associate professor at KVL from 2001 to 2004 she became increasingly engaged in work related to seed health and seed supply in developing countries. She is now working for Danida in Nicaragua as an agricultural extension and research systems adviser.

Md. Khairul Bashar started his career as a rice breeder in 1979 at the Bangladesh Rice Research Institute (BRRI) and became a conservationist and seed technologist by experience. He is one of the pioneers to apply farmers' knowledge and carry out participatory research under vulnerable ecosystems in Bangladesh. He frequently interacts with DAE, NGOs and farmers (including tribal groups) for rice germplasm collection, variety testing at farmers' fields and on-farm rice germplasm conservation. Under PETRRA he initiated a multi-actor rice seed network. Dr. Bashar is well linked to policy makers and the seed industry in Bangladesh.

Mark Holderness is director of agriculture for CAB International, based at the UK Centre of CABI Bioscience. Originally a plant pathologist, Dr. Holderness was instrumental in the development of the Seed Health Improvement sub-project, the largest sub-project under PETRRA, and of the Good Seed Initiative, a global partnership addressing the seed needs of the resource-poor. He has worked in a wide variety of

development contexts, including five years in Papua New Guinea, and particularly addresses the linkage of farmer innovation with that from science, in sustainable agriculture and integrated pest management.

Musherraf Husain is head of the Adaptive Research Division of the Bangladesh Rice Research Institute. He obtained a PhD in agronomy from Lincoln University, New Zealand in 1985 and published about thirty scientific papers. As an adaptive researcher Dr. Musherraf is deeply involved in extension systems, working with farmers, government and non-government extension service providers.

Md. Abdul Jabbar graduated from the Bangladesh Agricultural University in 1987. He has vast experience in seed production and since 1993 he has been in charge of the Seed Processing Centre of the Grameen Krishi Foundation. Under PETRRA Mr. Jabbar experimented with pro-poor innovations in the GKF seed sector.

Syed Samsuzzaman holds a PhD in agronomy from the University of the Philippines, Los Banos, Philippines. He has been directly involved in farming systems research and development programmes since joining the Bangladesh Agricultural Research Institute in 1985. He developed the Integrated Homestead Farming Model for landless and marginal farmers in Bangladesh, which received an award in EXPO 2000 in Hannover, Germany. Since 1996 he has been with RDRS, a national NGO, where he currently is director livelihoods, influencing government policies and practices. Dr. Zaman is co-founder of the Northwest focal area forum.

## ACKNOWLEDGEMENTS

All case studies presented in this book emerged under the Poverty Elimination Through Rice Research Assistance or PETRRA project, funded by the UK Department for International Development (DFID). From 1999 to 2004, the project was managed by the International Rice Research Institute (IRRI) in close collaboration with the Bangladesh Rice Research Institute (BRRI).

The richness of this book is a direct result of the strong commitment towards learning by doing. We recognise the donor DFID in its generous support to the experimentation shared in this book. IRRI senior management willingly endorsed local innovation. BRRI through its chairing of the Technical Committee encouraged diversity. The Secretary of Agriculture as the chairperson of the Project Steering Committee for PETRRA kept all lead institutions in research and extension informed and supported the innovations coming from PETRRA. We recognise the PETRRA Project Management Unit for providing an enabling environment for partner organisations to experiment.

We are indebted to Jeffery Bentley for his inspiring editorial inputs in major parts of the book. Other people who provided valuable ideas or commented on one or more chapters are Teeka Bhattarai, Stephen Biggs, Eric Boa, Hugh Brammer, Ann Braun, Solveig Danielsen, Toon Defoer, Helga Duhou, Chris Garforth, John Gaunt, Don Griffiths, Andy Hall, KL Heong, Janice Jiggins, Niels Louwaars, Rose Magor, Peter Mayer, Craig Meisner, Nick Nathaniels, Alastair Orr, Sam Page, Nathalie Peters, Jan Torp Petersen, Barry Pound, Scott Rousseu, Robert Tripp, Patrick Van Damme, Elske van de Fliert, Janny Vos and Marcella Vrolijk.
